

PATENTS & TECHNOLOGIES

i4F | DROP-LOCK TECHNOLOGIES

The world's easiest and best flooring installation systems

Powered by Click4U® and 3L TripleLock®

Up to 30% faster

Extremely high locking strength

All materials in all formats

Meets all performance standards

3L TripleLock

The "original" one piece drop-lock system for the short side.

3L TripleLock is the easiest and fastest system for flooring installation on the market, and suitable for existing high speed production. Unlike other systems, no inserts are needed on the short side. That means less work, smaller costs, fewer materials and a lower carbon footprint.

Click4U

An angle system for the long-side, combined with 3L TripleLock on the short side.

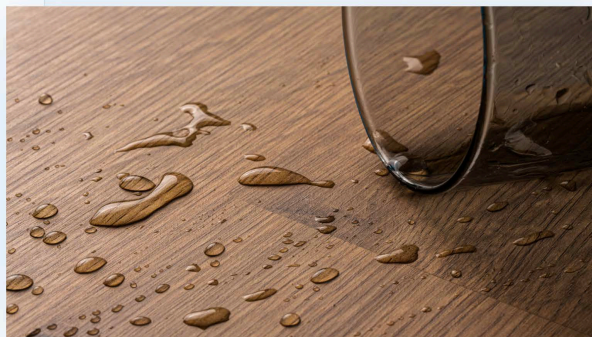

Click4U works seamlessly with 3L TripleLock, enabling extremely high locking strength. Fast and easy to install, no special tools are needed – and it's suitable for existing high speed production machinery.

WATER-RESISTANT TECHNOLOGY

Lock out water damage

Powered by i-Click4U®

With i4F you're home and dry. i-Click4U® (impermeable-Click4U) is the world's first ever water-resistant, one-piece, drop-lock flooring installation system, complementing i4F's leading Click4U technology. Water-resistance is built into the installation system itself, so no extra chemical sprays or sealants are needed. i-Click4U has passed tests from independent institutes in France, Germany and the US, and exceeds all NALFA requirements related to water resistant flooring. With i4F you're home and dry.

Water resistant
